[Bee data summaries.xlsx](#)

All,

Attached is an Excel workbook which contains the previously QAQC'd acute contact data, and has added to it all of the studies that were identified in a CETIS query that Lisa had run back in April. That query needed a lot of interpretation and did not include the endpoints, however it did provide a pretty good starting point for providing a list of what chemicals have what kinds of studies in house. There is one tab listed as "acute contact or oral" for which I couldn't assign a study to either of these. This list would need to be reviewed more closely to confirm the study type.

For those studies where I was able to confirm the study type, I ran a pivot analysis to see how many chemicals have the full suite of data submitted, more than I had thought, but the results do not help with knowing if the studies were acceptable. I think this may be a good place to start getting the DERs pulled.

Let me know if you have any questions or want me to work up something else.

Frank
